Richard C. Hittinger, LSP  
President

20+ Years Experience

- Brownfields Projects
- Air Permitting
- Auditing &  
Compliance
- Remediation Design
- Environmental Chemistry

Michael F. Geisser, PE, RLS, LSP  
Vice President

20+ Years Experience

- MCP Projects
- Marine Design &  
Permitting
- Site Remediation
- Geotechnical Engineering

Plus Experienced Staff

## INTRODUCTION

ALLIANCE Environmental Group, Inc., (AEG) provides professional services in the areas of environmental studies, permitting and design. The professionals at AEG have over 50 years of combined experience in areas ranging from Phase I Site Assessments to designing remediation systems for the cleanup of contamination.

AEG utilizes the most modern technologies on its projects to better meet the needs of our clients. And our reputation amongst regulators and the regulated community is second to none. Some recently completed AEG projects are described below.

*Alliance Environmental Group, Inc.*

### Ashton Mill Site Investigation and Remediation

AEG completed an investigation of the former Ashton Mill in Cumberland, Rhode Island. AEG coordinated the removal of contaminated soil, and installed a groundwater treatment system to recover separate phase petroleum in the groundwater. AEG negotiated the removal of this property from a USEPA Superfund Site. Now that AEG has addressed the Site environmental issues, a RAWP has been approved for the Site and restoration and redevelopment are underway.

### Carlton Elementary School Immediate Response Actions

During construction at the Carlton School in Salem, Massachusetts, a black, oily waste was encountered. AEG identified contamination at the Site and reported the Site to the MADEP on behalf of the City. AEG implemented an Immediate Response Action Plan and a Health and Safety Plan and oversaw the excavation and disposal of contaminated soil. AEG continues to monitor Site activities and, once environmental hazards are eliminated, AEG will close the Site according to the Massachusetts Contingency Plan.

### Narragansett Bay Commission: Combined Sewer Overflow Project

AEG was contracted by Shank/Balfour Beatty to provide contaminated material identification and handling guidelines, as well as field oversight during construction activities for the Narragansett Bay Commission Combined Sewer Overflow project in Providence, Rhode Island. AEG has provided air monitoring during the construction of access shafts to depths of 300 feet below surface grade. AEG has also coordinated the excavation and disposal of contaminated soil, and installed two groundwater treatment systems. AEG continues to monitor activities and assist in the characterization and handling of contaminated materials.
