

Mold Assessment and Remediation

Stopping or preventing water intrusion in a building is critical to avoid the growth of mold and mildew, particularly toxic black mold.

Black mold, or *Stachybotrys*, grows where there is moisture from water damage. Common warning signs include musty smells, or discolored drywall or wallpaper; however, buildings may have significant mold growth without visible signs.

Not only does black mold destroy infrastructure, it is a significant health hazard. *Stachybotrys* is one of several fungal species that is a major allergen, and it can have negative immunological and toxicological effects on both humans and animals.

Trichothecenes (which cause damage to the immune and nervous systems) and hemolysins (which cause hemorrhaging or bleeding) are just two of the many mycotoxins found in black mold.

If you have experienced water damage in your home or business, call the professionals at Alliance Environmental Group for complete Mold Assessment and Remediation services.

All services are performed in accordance with the IICRC S520 Standard and Reference Guide for Professional Mold Remediation. Staffed with OSHA-certified scientists and engineers, Alliance Environmental Group has a proven track record of success with facilities across the Northeast. We also offer competitively priced weekend and holiday services.
